

# AT&T Remote Vault<sup>SM</sup> Service

Faced with growing volumes of business critical data that have to be available 24x7, businesses are finding an increasing need for a fast, efficient, and automated backup solution. **With AT&T Remote Vault Service, a remote, maintenance-free online backup service, the dilemma of meeting comprehensive data protection needs is here at a price you can afford.**

## Complete Data Protection

AT&T Remote Vault is a fully-managed remote backup and restore service that meets businesses data protection, business continuity, and financial requirements. **With AT&T Remote Vault, you can use your broadband Internet connection to backup data from servers, PCs, or laptops to a secure off-site storage facility, where it is available for recovery at any time and to any location.**

## Backup and Restore Made Easy

AT&T Remote Vault Service simplifies every aspect of data protection, including system, implementation, configuration, administration, and actual backup and restoration. All data protection tasks are straightforward and require no training or technical expertise. And, when your business grows, you can protect your expanding data volumes simply and with no capital expenditures. Remote Vault will not become obsolete and is continually available to meet your data protection requirements.

## How it Works

Using advanced content addressed storage technology, once an initial backup has been completed for a particular server or PC, daily backups and point-in-time snapshots occur with minimal impact on system and network performance. And with its web-based portal, AT&T's Remote Vault service ensures immediate access to vital company data. This enables data recovery whenever and wherever you need, whether to an existing company location or a disaster recovery facility.

## Security All the Way

Your data is secured at every point during backup, storage, and recovery. Using government standard 128-bit AES encryption, AT&T Remote Vault ensures that your data is safely transmitted. Your data is stored in an AT&T Internet Data Center with extensive physical security including redundant, uninterruptible power sources, state-of-the-art fire suppression and air conditioning systems, and network management and monitoring. With AT&T Remote Vault, you can be assured that your business data is protected.

## Intuitive Restore Process

AT&T Remote Vault is designed to make data restores easy and intuitive, even for a non-technical user. Simply log into the AT&T Remote Vault restore site, select the data you want to restore, and identify where you want to restore it. Data can be restored anytime and anywhere, even to a different PC or server. You can recover the current version of a file or restore a previous version in a few minutes without IT assistance.

## Centralized Management

AT&T Remote Vault enables administrators to centrally manage the entire account, company-wide, from a single web-based portal. You can get the status of all backups, view the amount of data being protected, and manage your account options all from the AT&T BusinessDirect® Portal.

## On-Demand Service

AT&T Remote Vault Service is a pay-as-you-go service, making data backup and restore costs predictable, affordable, and manageable. The service includes all the service delivery hardware, software, installation, configuration, and operational support to provide a best practices data protection service at a cost less than you might expect. Backed by our world-class 24x7 monitoring, management, and support services, Remote Vault offers a fast, cost-efficient, and convenient way to achieve reliable and secure data protection, and fast and easy restores.
